CONTENTS

Table		Page
	Notes	3
1	Wage and Salary Earners in Civilian Employment June 1966 to June 1973	4
2	Wage and Salary Earners in Civilian Employment Industry Groups and Sub-Groups - Males	5 - 8
3	Wage and Salary Earners in Civilian Employment Industry Groups and Sub-Groups - Female	9 - 12
4	Wage and Salary Earners in Civilian Employment Government Bodies	13

The figures shown in this publication have been taken from publications issued by the Commonwealth Statistician, Canberra, which give particulars for each of the Australian States. Figures for the period from June 1966 to June 1971 appear in Employed Wage and Salary Earners: June 1966 to June 1969 and July 1969 to June 1971, and those for later months in the monthly release Employment and Unemployment.

The particulars contained in the tables, except those in Table 4 relating to government employees, are based on data derived from the Population Census of 30 June 1966. The statistics shown for June 1966 are referred to as 'benchmarks'. For subsequent periods the figures shown are estimates designed to measure month-to-month changes in the sector of employment to which the benchmarks relate. These estimates are not comparable with those of earlier periods, for two reasons: (a) the adoption of a new definition of the labour force in the 1966 Population Census (from which the benchmarks for the current series were derived) and (b) the inclusion of full-blood Aborigines. The new definition resulted in the inclusion of a considerable number of part-time employees (mostly females) who had previously been excluded. These factors have affected the series for both private and government employment.

Between population censuses the employment data are obtained from three main sources: (i) current pay-roll tax returns, which are lodged by all employers paying more than \$400 per week in wages, other than those specifically exempted under the Commonwealth and State Pay-roll Tax Acts of 1971; (ii) current returns from government bodies; and (iii) some other current returns of employment (e.g. for hospitals). The balance, i.e. unrecorded private employment, is estimated.

The figures relate only to civilian wage and salary earners, not to the total labour force. They therefore exclude employers, self-employed persons, unpaid helpers, and members of the defence forces. Employees in agriculture and in private domestic service are not included in the estimates because the available data are inadequate.

The benchmark figures were derived from particulars recorded for individuals on population census schedules, while the estimated monthly changes are derived mainly from reports supplied by employers, relating to enterprises or establishments. Because the two sources differ in some cases in the reporting of industry, the industry dissection of the census totals has been adjusted to conform as closely as possible to an establishment reporting basis. The industry classification used in preparing the estimates is that of the Population Census of 30 June 1966.

Current data supplied by reporting enterprises or establishments generally refer to persons on the pay-roll for the last pay-period in each month. Persons who are on paid leave or who work during part of the pay-period and are unemployed or on strike during the rest of the period are generally counted as employed. Those not shown on employers' pay-rolls because they are on leave without pay, on strike or stood down for the entire period are excluded.

Particulars of employment obtained from other collections, such as the annual manufacturing census and periodic censuses and sample surveys of retail establishments, are used to check and, where desirable, to revise estimates in relevant sections. For this reason some of the figures in the following tables are subject to revision as the results of later censuses and surveys become available.

Employees of government and semi-government authorities are included in the figures shown in Tables 1-3. Estimates of the numbers employed by the Commonwealth, State, and local government authorities are available separately and are published in Table 4.

In due course employment estimates for periods prior to the Census of June 1966 will be revised, but on a basis comparable with that of the 1961 Census benchmarks, the information needed to revise these benchmarks on the 1966 Census basis not being available.

At the 1971 Population Census, trainee teachers were, for the first time, classified as not in the labour force. From July 1971 onwards they have been excluded from estimates of employed wage and salary earners, and in consequence, there is a break in the series between June and July 1971. The approximate numbers excluded from the estimates for July 1971 were 400 males and 1,500 females.

Rounding of Figures. All estimates have been rounded to thousands (correct to the first place of decimals) without making those adjustments which would be needed to make the rounded figures add to the rounded total. It is for this reason that figures do not always add to the totals shown in the tables.
